Abstract of **EP0711560**

Oral compsns. contain a rutaceous flavonoid, partic. micronised diosmin (I), as an effervescent granulate in the form of tablets or sachets. The compsn. pref. comprises 0.1-5 g (I) which is pref. micronised to a particle size of 0.1-10 mu m. The effervescent formulation is achieved by use of a carboxylic acid and one or more carbonates. Other ingredients include sweeteners, flavourings and carriers. The small amt. of water present in (I) is used to start a single phase granulation process.
